

Authorization for the Processing and Access to Electric Consumption Data

Basic Information on Data Protection

If the customer authorizes it, the Centro Tecnológico de la Energía ("ITE") may view and download the data from their supply/ies into its own systems, allowing the customer to access information about their electricity consumption and supply location through the Datadis platform (www.datadis.es), for the purpose of conducting statistical analyses, with which ITE has a formalized partnership agreement. This information will only be used for this purpose and will not be shared with any third parties.

Authorized Consumption Period

This authorization will be valid for 24 months, starting from the date of signature. The customer may request the cancellation of this authorization at any time, without any compensation or penalty from ITE, by submitting a written request via email to protecciondedatos@ite.es. In the event that this authorization is revoked, ITE will notify the Datadis platform of the revocation within a maximum of three days. The Datadis C.B. platform will be exempt from any liability if this obligation is not fulfilled.

Purpose of the processing

Anonymized statistical analysis of electricity consumption.

Identifying personal data

Your identifying personal data will be processed by Datadis in order to provide ITE with your consumption data. Datadis will only store identifying personal data as long as you do not exercise your right to delete your data.

Regarding the processing carried out by Datadis, you can exercise your rights at dpo@datadis.es, as well as contact the Data Protection Officer or reach out to the supervisory authority (Spanish Data Protection Agency) if you deem it necessary. The legal basis for the processing is your consent. You can find more information in Datadis' privacy policy.

I authorise:

Yes,

CUPS:

No
